SUMMARY

QA Automation Engineer with 5 years of experience in manual and automation testing, building scalable test automation frameworks for web, mobile, and API platforms using Selenium WebDriver, Playwright, Java, TestNG, and REST Assured. Experienced in B2B2C fintech platforms, including automation of New-to-Bank (NTB) and Existing-to-Bank (ETB) user flows, with hands-on experience in AML and dedupe testing and a working understanding of webhooks and API integrations. Skilled in CI/CD pipeline integration, backend validation, cloud-based testing on AWS, and end-to-end automation strategy within Agile/Scrum environments. Proven track record of reducing regression cycle time and improving release quality for fintech applications.

CORE SKILLS

Test Automation Framework Development • Selenium WebDriver • Playwright • Java • TestNG • Appium • POM • BDD / Cucumber • API Testing (Postman, REST Assured, Swagger UI) • Performance Testing (JMeter) • Functional, Regression, Integration, Sanity & Smoke Testing • AWS (S3, DynamoDB, Lambda, CloudWatch) • SQL/MySQL • MongoDB • Redis • Git • Jenkins • JIRA • Maven • CI/CD • Extent Reports • Allure Reports • Agile/Scrum

Fintech & Integration: B2B2C Fintech • NTB / ETB User Flows • AML • Dedupe • Webhooks • API Integration Testing • KYC / VKYC • Payment & Callback Validation • Mutual Funds • Fixed Deposits • Global Investing • Stocks

PROFESSIONAL EXPERIENCE

QA Automation Engineer — Fixerra (Remote)

Feb 2024 – Present

- Designed and maintained a scalable test automation framework using Java, TestNG, Maven, and the Page Object Model (POM) design pattern, reducing manual regression effort by 60% and improving release turnaround time.
- Built reusable automation utilities and implemented a data-driven test architecture, improving framework maintainability across projects.
- Automated REST API test suites using Postman and REST Assured, improving test efficiency and backend reliability.
- Performed backend data validation using MySQL, MongoDB, and Redis to ensure data consistency and integrity across services.
- Led end-to-end automation and manual testing for critical fintech features including Quick FD Booking, Resume Journey, KYC, and VKYC flows.
- Automated New-to-Bank (NTB) and Existing-to-Bank (ETB) user flows end to end for a B2B2C fintech platform, covering onboarding, KYC, and investment journeys for both customer types.
- Hands-on testing of AML and dedupe checks within NTB and ETB flows, along with webhook callbacks and API integrations with issuer-bank and third-party systems.
- Managed AWS services (S3, DynamoDB, Lambda, CloudWatch) supporting test infrastructure and monitoring.
- Collaborated with cross-functional Agile teams using JIRA for defect tracking and sprint planning.
- Integrated automated test suites into Jenkins CI/CD pipelines for continuous regression execution on every build.
- Used Git for version control and branch management across automation framework codebase.

QA Engineer — Fintso (Bengaluru)

Sep 2021 – Jan 2024

- Automated web UI testing using Selenium WebDriver, Java, and TestNG with the Page Object Model (POM), a data-driven framework, and Extent Reports, including cross-browser testing.
- Performed functional testing for mutual fund, fixed deposit, global investment, and stock products across the Partner app and Client app.
- Built and executed BDD-style automated tests using Cucumber to improve collaboration with business stakeholders.
- Performed mobile automation testing on Android applications using Appium.
- Automated REST API validation with Rest Assured and Postman, including API chaining, authentication token/header handling, and JSON schema validation, improving backend reliability.
- Validated backend data using MongoDB and Redis alongside API test results to ensure data integrity.
- Created and executed manual and automated test cases; tracked defects in JIRA and partnered with developers for rapid issue resolution.
- Participated in sprint planning, backlog grooming, and daily standups in an Agile development environment.

- Integrated automation suites into Jenkins CI/CD pipelines and managed test code using Git version control.

QA Automation Engineer Fellowship — Bridgelabz (Remote)

Feb 2021 – Aug 2021

- Built Selenium automation scripts for e-commerce and travel applications.
- Performed UI, functional, and regression testing across multiple browsers.
- Executed cross-browser compatibility testing to validate consistent application behavior.

KEY PROJECTS

Digital Fixed Deposit Investment Platform — Fixerra (FinTech)

Feb 2024 – Present

Java, Selenium WebDriver, TestNG, Maven, REST Assured, Postman, SQL/MySQL, Jenkins, Git, AWS, Extent/Allure Reports

- Owned end-to-end testing of the digital Fixed Deposit investment journey: Login → Landing → Home/Active → FD Details → KYC → Resume Journey → Review & Pay.
- Tested issuer-specific journeys across SSFB, Unity Bank, Bajaj Finance, Mahindra Finance, and Shriram Finance.
- Automated both NTB and ETB flows, validating AML and dedupe outcomes, webhook callbacks, and API integrations with issuer systems.
- Automated UI scenarios using Java, Selenium WebDriver, TestNG, and the Page Object Model; automated REST APIs using REST Assured with request/response, status-code, and business-rule validation.
- Performed backend validation using SQL/MySQL and validated payment, callback, resume-journey, portfolio, and VKYC-related flows.
- Contributed to an early-stage exploration of a Playwright-based framework for multi-issuer FD journeys, combined API/UI integration checks, dynamic test-data handling, cross-browser coverage, and structured Extent/Allure reporting.
- Supported UAT and release validation, defect investigation, and cross-team collaboration with development and product teams.

Resume Journey Test Automation (Playwright) — Fixerra (FinTech)

May 2026 – Jul 2026

Playwright, API/UI integration testing, Extent/Allure Reports

- Automated the Resume Journey end to end using Playwright, covering the step between KYC and Review & Pay in the digital Fixed Deposit investment flow.
- Combined API and UI checks within the same test flows, with dynamic test-data handling to keep scenarios repeatable across runs.
- Ran the suite across multiple browsers and produced structured Extent/Allure reports for clear pass/fail visibility.
- Built the approach to be reusable across multi-issuer FD journeys.

Wealth Management Platform — Fintso (FinTech)

Sep 2021 – Jan 2024

Java, Selenium WebDriver, TestNG, Extent Reports, Appium, Postman, REST Assured, Jenkins, JIRA

- Analyzed requirements and user stories to prepare detailed test scenarios and test cases for the Partner app and Client app of an investment platform covering mutual funds, fixed deposits, global investment, and stocks.
- Developed web UI automation using Selenium WebDriver, Java, TestNG, and a data-driven framework with Extent Reports and cross-browser coverage; automated Android mobile testing using Appium.
- Performed API testing using Postman and REST Assured, and integrated automated test execution with Jenkins CI/CD.
- Executed functional, smoke, regression, and integration testing; logged and tracked defects through JIRA within Agile/Scrum sprints to improve test coverage and release quality.

KEY ACHIEVEMENTS

- Reduced regression execution time by 70% through automation framework optimization.
- Increased automation coverage for critical fintech user journeys by 70%.
- Improved release quality by identifying critical production defects during UAT and regression testing.

EDUCATION

B.Tech in Information Technology — MET's BKC Institute of Engineering, Nashik
